Kyriba App Studio

Kyriba App Studio provides a flexible, self-service platform for seamless integration between Kyriba and external systems like ERPs, data providers, and financial services platforms. As a key part of Kyriba's Connectivity-as-a-Service (CaaS), it offers robust, scalable, and secure data integration essential for modern financial management, empowering organizations to keep pace with evolving technological and business needs.

Key Features

Kyriba App Studio enhances data agility and simplifies integration with a user-friendly, scalable, and low-code solution that reduces IT complexity. Key features include:

Workflow Flexibility

Schedule or trigger workflows via API for flexible data exchanges.

Data Handling

Convert and map data (e.g., JSON to CSV) for system compatibility and apply logic-based rules for seamless integration.

AI-Powered Data Transformation

Use embedded ChatGPT* to assist users in generating scripts for data conversion and mapping, facilitating format transformations.

*Requires the user to have an API key from OpenAI.

Integration Management

Easily manage workflow properties and credentials directly in the Kyriba UI for streamlined setup and maintenance.

Standardized Data Processes

Use Kyriba's templates for consistent data import/export operations.

Comprehensive Orchestration

Utilize Kyriba APIs for efficient workflow orchestration with robust logging and monitoring.

Supported Integration Scenarios

Kyriba App Studio can support a number of use cases, including:

Automated Workflows
Automated integration of market and third party data into Kyriba.

Real-Time Data Synchronization
Synchronize data across systems in real-time to support timely decision-making and financial reporting.

Automated Reporting
Automate the extraction and consolidation of financial reports from various systems into Kyriba for comprehensive financial analysis.

Regulatory Compliance
Facilitate compliance with financial regulations through controlled and transparent data flows.

Scenario	What Kyriba App Studio Enables
POST data for integration to Kyriba	ERPs can generate and send payment requests, cash forecasts, etc., transform to Kyriba specs and integrate using Process Templates.
GET data export from Kyriba	ERPs can request Financial or Cash Accounting, Payment Status or other data from Kyriba Process Templates and transform it to customer specifications.
Scheduled workflow to get data from an API and integrate to Kyriba	Customers can schedule to have daily balances, or market data rates to be retrieved from a third party data provider, transformed and integrated into Kyriba.
Scheduled workflow to get data from Kyriba and POST to an API	Customers can schedule to have Financial or Cash Accounting, Bank Statements or Payment Status data exported from Kyriba, transformed and forwarded to an API.
